Plungie Info Guide

[Why Plungie](#)[Location + Access](#)[Design your Plungie](#)[Add-ons + Mods](#)[Equipment](#)[Installation](#)[Next steps](#)[Contact us](#)

Enjoy your pool in days, not months.™

Plungie is the fastest, easiest way to enjoy your new pool.

With the ease and speed of Plungie, you can have more control over your budget and fewer unexpected costs.

While the traditional pool build process can take months from start to finish, your Plungie can be installed in a matter of days.

A Plungie install is less disruptive to your daily life, with fewer tradespeople required at your home and a fast installation process that won't leave a gaping hole in your backyard for weeks on end.

EASE + SPEED

Plungie is the fastest, easiest way to enjoy your new pool. In fact, our pre-cast concrete pool solution is on average 74% faster than the traditional pool installation process.

PURPOSE-BUILT

Our patented monolithic design provides maximum strength at the lightest possible weight. Unlike some alternatives in the market, that re-purpose shipping containers or rainwater tanks, our purpose-built pools are engineered to last, and designed for life. You can rest assured that every Plungie will stand the test of time.

QUALITY + WARRANTY

We're so confident in the durability and structural integrity of our pre-cast concrete pools, that each Plungie is covered by an industry-leading 10-year structural and internal ecoFinish warranty.

MADE LOCAL

Every Plungie is proudly American-made in Alvarado, Texas. We believe that pools are the heartbeat of American yards and we want to make pool ownership a possibility for more homeowners.

Understanding your property access is the first critical step when considering a Plungie.

VACANT BLOCK

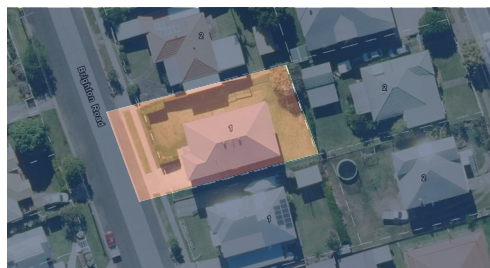

Preferred method of installation.

A vacant lot provides the easiest and most straightforward point of access, as a crane can drive the pool straight onto the site and put it in place.

A vacant neighboring property may also provide easy and straightforward access, depending on the desired pool placement location.

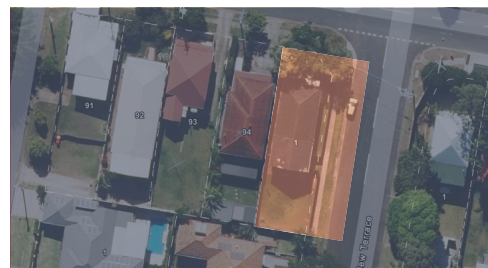

SIDE ACCESS

Adequate method of installation.

Access down the side of a property can also allow for a crane to drive the pool straight onto the site and put it in place. Slew cranes may also be used in properties with side access. This allows for a closer vantage point and minimizes the required reach distance. Any protruding objects, such as eaves, guttering, gas and water infrastructure, overhanging trees and power lines, may affect your access and should also be considered. A neighboring property may also provide side access, depending on the desired pool placement location.

CORNER BLOCK ACCESS

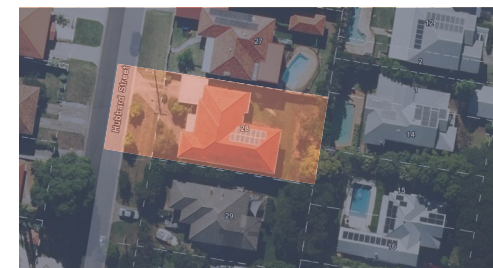

Adequate method of installation.

A corner block ease of access can vary depending on surrounding obstacles, including fences, walls, overhead power lines or landscaping features, which may obstruct the path of the crane.

These impediments might necessitate temporary removal or adjustments to ensure the safe and successful installation of the pool.

OVER HOUSE

Difficult method of installation and can increase cost.

Where access is restricted by a structure or a house, the Plungie can be lifted over these using a slew crane. The slewing crane would need to be set up in a clear space, large enough to allow for its setup footprint and to be able lift over the structure or home.

This is where reach distance plays a significant part in your crane cost. The further the reach, the larger the crane, and the larger the crane, the higher the cost.

Plungie Info Guide

Choose the perfect size to suit your home.
A Plungie can be installed in-ground, above-ground and anywhere in-between.

Still can't decide?

Try our online 3D Visualizer and to design your Plungie and place it into your backyard!

ARENA

11' 5" Round

Say hello to the pre-cast round concrete pool of your dreams!

The Plungie Arena is a perfect fit for any size yard - plus, with plenty of bench space available for bringing family and friends together.

[View online](#)[Download Specification Sheet](#)

STUDIO

12' x 7'

Think you don't have the space for a pool? Think again.

We've designed the Plungie Studio with smaller spaces in mind, making it an excellent choice for front yards and inner-city living.

[View online](#)[Download Specification Sheet](#)

ORIGINAL

15' x 8'

The Plungie Original has found its way into thousands of Americans backyards.

Tried and tested, our Plungie Original adds instant appeal to any property - creating the perfect outdoor living and entertaining space.

Seamlessly integrate your Plungie into your home with a range of selections below:

Heater

This Hayward heater has the ability to heat your Plungie up to 93°F – perfect for year-round swimming.

[Learn More →](#)

Cooler

Embrace the refreshing coolness of AquaCHILL – the perfect solution to maintain perfectly cool water.

[Learn More →](#)

Heat + Chill Pump

Heat or chill? No problem! Utilizing industry-first microchannel tech to get your water to the perfect temperature.

[Learn More →](#)

Waterline Tile Provision

A provision that can be made to allow you to apply a waterline tile to your pool, once installed.

[Learn More →](#)

Spa Jets

Take your Plungie to the next level and create your very own spa-like oasis, by including spa jets.

[Learn More →](#)

Accessory Holder

This modification allows you to insert a range of different accessories, like an umbrella, into the step of your Plungie.

[Learn More →](#)

Auto Fill

Make your life easier! This handy device allows for your pool water to be automatically topped up.

[Learn More →](#)

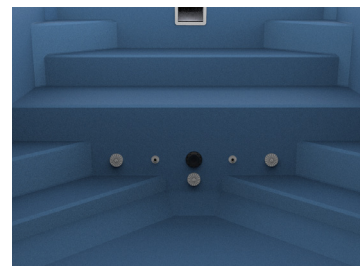

Top Edge ecoFinish

A modification that allows for the ecoFinish to continue over the top edge of the Plungie.

[Learn More →](#)

Fire Provision

A small modification that's made to the pool shell, allowing it to be used as a firefighting water source.

[Learn More →](#)

Construction cover

Protect the pool's interior and allow your trades to work around your Plungie for the rest of the project.

[Why Plungie](#)[Location + Access](#)[Design your Plungie](#)[Add-ons + Mods](#)[Equipment](#)[Installation](#)[Next steps](#)[Contact us](#)

Base Equipment Package

Our Base Equipment Package is all you need to get your Plungie up and running.

- + Hayward Cartridge C200S
- + Single speed pump
- + Hayward Chlorinator CL2002S
- + Hayward Three Way Valve
- + Hayward Check Valve

Eco Equipment Package

The ECO Equipment Package takes the Base package and upgrades your pump to a variable speed pump.

- + Hayward Cartridge C200S
- + Hayward MaxFlo VS500
- + Hayward Chlorinator CL2002S
- + Hayward Three Way Valve
- + Hayward Check Valve

Smart Eco Equipment Package

Our top-of-the-line Smart ECO Equipment Package combines the variable speed pump with a salt chlorinator + Smart System, to automatically manage water quality via WiFi connectivity.

- + Hayward Cartridge C200S
- + Hayward MaxFlo VS500
- + Hayward Salt Chlorinator with Smart System
- + Hayward Three Way Valve
- + Hayward Check Valve

Equipment Delivery and Installation

- Pricing includes delivery to your site direct from our trade partner.
- Price excludes installation.
- Installation of equipment should be undertaken by a licensed professional. Plungie will provide general information on installation to assist.

Who can install a Plungie?

Permits are required to have a pool installed in America, which is why an appropriately qualified tradesperson must install every Plungie.

That doesn't mean you need to hire a specialist pool builder, though.

PLUNGIE AUTHORIZED INSTALLERS

Our network of Authorized Installers are here to help your Plungie install go as smoothly as possible. With experience across a wide range of projects, our Installers will have you swimming sooner.

 [Find an installer near you](#)

Look for our logo

Easily identify our trusted installers with the Plungie Authorized logo.

OWNER-BUILDER

Installing a Plungie as an owner-builder is available in some locations. It's important to check the required processes and permits with your local government.

BRING YOUR OWN BUILDER (BYOB)

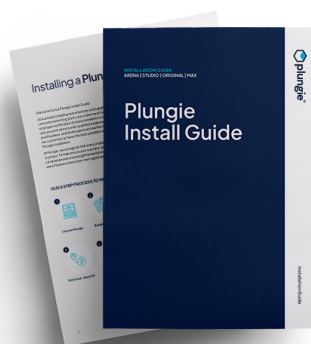

Any qualified home builder or pool builder can manage the certification, site preparation, and installation of a Plungie. Some states and territories also allow for a structural landscaper or plumber to install one.

Get a Plungie in 8 easy steps

For years, the pool-building process has been too complicated. At Plungie, we've streamlined this process into 8 easy steps.

Not only does this give builders more control over their projects, but homeowners can enjoy a pool in days, not months.

 [Download our Install Guide](#)

Choose Plungie

With four versatile pool models, choosing your Plungie could be the hardest part of the whole process. We have clear specifications for the Arena, Studio, Original and Max to help you decide which model is right for your project.

With our BIM content library, including Autocad, Archicad and Revit, professionals can also easily specify a Plungie into their project.

Building Approval

Permits are required to begin the installation process. We recommend contacting your local permit office for further details. To make life easy, we'll supply you with pre-engineered specifications for pool construction and footings, based on different site classifications.

Site Preparation

The site preparation for the installation of a Plungie will include:

- Excavation
- Subgrade Preparation
- Sub base Preparation

You will be required to complete site preparation in accordance with standardized engineering requirements, as per your specific site classification.

Crane Hire + Delivery

Most reputable crane hire companies offer a free site assessment and can provide you with a quote based on our lifting guides. These are found in step 4 of our Install Guide.

Electrical + Backfill

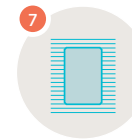

Next, a trade-qualified electrician must bond your Plungie. If the Plungie is being installed in-ground or semi-recessed, you will need to backfill the over-excavated area. Low-cost options such as recycled drainage gravel will do the trick and allow for drainage away from the concrete footing.

All backfill requirements can be found in our Engineering Set.

Plumb Up

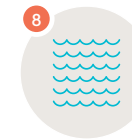

Every Plungie is supplied with its primary plumbing fixtures pre-fitted (you're welcome!). This includes the skimmer box, hydrostatic valve, and filtration returns. You'll need to ensure that the required power provisions are made available for your chosen equipment package to run on.

Finishings + Surrounds

With a Plungie, you can enjoy all the efficiencies of prefabrication while having plenty of options for personalization. Once the pool is installed, the following elements can be added to help it align with your project design:

- Coping tiles
- Waterline tiles
- Decking
- Paving
- Landscaping

Fill + Start Up

Prior to filling, the Plungie requires final certification and inspection. It is vital that you install the hydrostatic valve, an in-depth guide can be found in step 8 of the Plungie Install Guide.

All that's left to do is [Register your Plungie Warranty](#) and marvel at how quick and easy your Plungie install was.
